

BONPARD[®]

FORAGE

Bonpard Forage Supplement is a feed supplement for horses and ponies that are fed a diet of roughage with little or no concentrates.

Roughage provides sufficient energy and protein but insufficient vitamins and minerals. This deficiency can also occur when feeding small quantities of concentrates! Bonpard Forage Supplement is based on the requirements of a healthy horse, nothing more and nothing less.

Characteristics:

- provides a complete and healthy diet
- is required when horses/ponies receive < 1-2 kg concentrates per day
- tasty and easily absorbable minerals
- easy-to-feed pellet form

Supplement

A feed supplement for horses that are fed on roughage alone

This is how you feed Forage

A complete and healthy diet

Bonpard Forage Supplement turns a diet of roughage alone into a complete and healthy diet. A horse on a diet of roughage alone needs additional copper, zinc, selenium and vitamin E. Copper and zinc are added as readily available and tasty hydroxy compounds. Selenium is efficiently utilised through the use of selenium methionine.

Roughage, roughage, roughage. A diet of roughage alone is natural and healthy, and, for many horses, provides sufficient energy and protein to maintain a good condition, even in light work. Roughage also contains minerals and vitamins. However, the supply of vitamins and minerals is incomplete in a diet of roughage alone. With **Bonpard Forage Supplement** it isn't.

Simple and effective. Without the mess of powders. These small pellets are easy to feed. Your horse needs nothing more!

Body Condition Score. A horse that is allowed to eat an unlimited amount of roughage can become obese. It will then have a too high body condition score, making it necessary to restrict feed intake. To check whether you feed enough, too little or perhaps too much roughage, you should check every six weeks whether your horse is at the right weight using the Bonpard Body Condition Score. Your horse should be assessed by looking at it and feeling for fat cover. Muscle tissue and fat tissue can be visually similar, but fat tissue is softer than muscle tissue.

Dietary advice

per 100 kg BW per day	Average quality of hay		Course hay	
	Rest	Light work	Rest	Light work
	20 g Bonpard Forage Supplement			
200-300 kg	2 kg	2,3 kg	2,2 kg	2,5 kg
300-450 kg	1,8 kg	2,1 kg	2 kg	2,4 kg
450-600 kg	1,6 kg	2 kg	1,9 kg	2,3 kg
600-750 kg	1,5 kg	1,9 kg	1,7 kg	2,1 kg
